

Fifth meeting

Date unknown

Meeting begun

Deadlines are looming.

Feasibility demo is due soon after Vac finishes

- Tools installed and running on machine
- Some code
 - Running on both emulator and Handset

Revise proposal

- Hussein's criticism about the possibility of libraries existing
- Dylan's suggestion that security is out of scope

Prof. Marsden would acquire Windows 7 phones for the members as soon as he could.

Sashen's section

After doing some research, the following was discovered

- Each tile is an application
- Therefore each person is an application

Prof. Marsden suggested looking at multi-tasking on WP7. He also warned that the ability to do so was limited when compared with android; and that assumptions should not be made about WP7 capabilities in this matter

Also spoke about Realtime Operating Systems.

- Guaranteed network services while others run in background.

Suggestions for the vacation

- Sort out the technology
- Iron out bugs as soon as possible
- Take some rest time. The term was rough.

Meeting closed
