

Seventh meeting

7th August. 1pm

Apologies:

Sashen

Meeting begun

Bryan's Section

Take a look at the content provider.

- The mac addresses can be passed to that, and stored.
- Has a content resolver
- Utilizes SQL lite database.

Can ask : to what extent does android support

- location services
- Bluetooth discovery
- Wifi discovery

Two approaches discussed

1. Discover devices that are near me
2. Find out where my friends are: and then test if their locations are near.
 - a. This one has been done loads.

Spend some time thinking about every model in these two cases: for eg

- Service on phone
- Central server
- Using sensors

Action list

- Look at content provider
- Look at location services

Tsu-Shiuan

Busy installing tools

Been looking at Wifi API

Considering the four factors of evaluation (B: *I'm not sure what these are*)

Action list

- Implement Bt/Wifi and transfer
- Find metric

In conclusion

The members need to keep coding. Even if busy with other stuff.

Meeting closed. Next meeting scheduled 16th August 11am.
