

Tenth meeting

9th October 12:30pm

Meeting begun

Tsu-Shiuan's section

- Has been testing
- Transfer rates vary wildly, not sure why
- Devices need to check if data has arrived to tell the other to stop sending.
 - Consistently creates a bottleneck. Must investigate.
- Was able to write sent data to file

Bryan's Section

- Wasted time trying to implement automation
 - Should have been evaluating already!! Must get on that soon
- Must evaluate how often devices are discovered, and at what distance.
- Must test data usage
- Must test Top
 - Unix command to monitor CPU processes
- Must start writing some English

Sashen's Section

- Only has one Participatory design session left to do
 - Meeting those from the last session again
- Run some experiments to see if interface is any good
- Running out of time though, might not get to implement last round of improvements.
- Suggested Sashen run the experiment, write that up and send it to Gary, and do implementation if possible, while Gary has the English

Everyone

- Test and write!!
