Meeting Notes - 27 July 2015

Meeting: Hussein and Craig

- Impromptu meeting with Hussein
- Discussed viability of using machine learning as a tool for metadata mapping
- I suggested an artificial neural network approach
- Hussein argued that other ML approaches are better, but still suggested that a heuristic based approach would be best.
- Agreed to discuss the matter further on weekly meeting (31 July 2015)

Results of meeting:
- It is likely that ML will not be used
- Heuristic based approach will be kept.
