Meeting Notes - 7 August 2015

Meeting: Hussein, Darryl and Craig

- LimeSurvey server crashed
- Send survey to tech and dev mailing lists
- Primary client: NRF
- Larger community: mailing lists
- It is now feasible to move to design:
    - High-level design
        - detailed class diagrams
        - map functional requirements to classes
        - classes: entity-class-decomposition
        - requirements -> sequence diagrams -> classes
    - get users involved: Digital Libraries, mailing lists
    - user-centered design
    - focus group
        - paper-prototype (read more about)
        - decide on what to draw
    - Users must get an idea of how the frontend design works
- What's next:
    - start with sequence diagrams
- Put meetings notes on the project websites for final deliverable
- Discussed feasibility of converting Craig's section towards a more experimental project that would use machine learning.
- Notes about the conference presentation:
    - present on proposal
    - remove the parts about resources (bitbucket, etc) and timeline
    - fine to mention NRF
    - possibly publish URL for the survey
    - add more detail on project
    - where are we now
    - where are we going
